

Colour has the extraordinary power to evoke emotion, impact perception and transform an environment. Much is known about the properties of colour and its effect on human behaviour, but what of the medium that transports colour to us - light?

This CPD presentation details the advantages and disadvantages of the LED revolution and identifies the key factors that architects, designers and store development teams must consider when specifying or using LED lighting in their designs.

Unlocking the Code of Colour

Delve into the fascinating subject of light and colour, their effects on our bodies and minds, and the pros and cons of the LED revolution.

This presentation will help you understand:

The non-visual effects of colour and light

•

The physiological and psychological effects of light

•

The relationship and use of colour and light in the built environment

•

The importance of transmission by a light fitting to help realise the design intention

•

How to evaluate the quality of light from a lighting fixture and how that quality can affect design

CPD Duration: 45' + Q&A

CPD Credit: 1 Credit

Atrium will issue a digital Certificate of Attendance to all participants
